

Grovo

Skills Training Management

As a training management system, Grovo is an indispensable learning tool for the modern student or staff member. With training tracking, skills gaps can be quickly identified, while the engaging content empowers individuals and shows them a better way to learn.

Grovo is a skills development and accelerated training delivery system that is loved by learners. With thousands of micro learning videos, complex topics are broken down into fun and accessible 60-second instructional tutorials that get the point across simply. Videos are paired with optional assessments and this practical aspect results in higher retention and an increased performance.

With training tracking and a flexible reporting interface, individuals' skills gaps can be quickly identified, and through engaging content, they can become better performers.

INNOVATIVE EDUCATIONAL SOFTWARE AT YOUR FINGERTIPS

Eiffel Corp is an internationally recognised eLearning and blended learning brand that is trusted and respected by customers, partners and educationalists throughout Africa and the world.

Eiffel Corp Services and Custom eLearning

staffroom

Flexible School Management Software

This innovative and user friendly software reduces the burden on school administration staff, principals and educators. Staffroom is an affordable and easy-to-use school administration system that is packed with relevant features that save effort, money and time.

Staffroom isn't just school admin software, it is a complete service that includes support, specialised technical work, on-boarding services and self-help resources. Records are stored centrally and securely, allowing learner information to be instantly available. Data is accessible anywhere, anytime - on a range of devices.

Blackboard

Enterprise Online Learning Solutions

Blackboard's range of platforms improve the learning experience through technology across universities, school classrooms, professional training and public sector environments.

Blackboard Learn - From online course notes and live discussions to a full VLE, Blackboard Learn is the foundation for a rich education experience, delivering the technology, services and support you expect in an LMS.

Blackboard Mobile - This gives access to course content and organisations on mobile devices. It's an extension of the Blackboard Learn implementation in an engaging and mobile friendly interface.

Blackboard Student - This app is fun, simple, intuitive and gives students the information they want, the connections they crave, and the personalisation they demand. They can check grades, view and interact with courses, instructors, classmates and content across all devices.

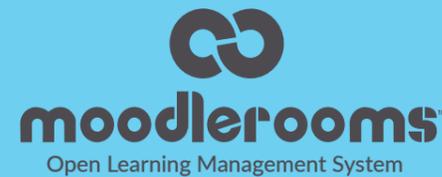

Blackboard Collaborate - creates a real-time online collaborative platform that will engage everyone with each other and your content via their desktop or mobile device. It's more than just web-conferencing software.

Blackboard Analytics - brings all your enterprise data together and using proven Higher Education data models, yields actionable information from it, fast.

Blackboard Managed Hosting - Blackboard uses it's breadth of resources and depth of experience to help you manage risk, growth, change, and uptime. It delivers technical expertise, scalability and stability.

iThenticate compares submitted documents against the World Wide Web and world's largest scholarly comparison database to help authors, publishers and organizations ensure that the content within a document is original and sourced correctly.

As a powerful virtual learning environment, Moodlerooms allows you to engage with and support students, while the leading edge technology helps you to streamline workflows, reduce admin time, and create advanced and targeted reports.

Institutions that want to develop their eLearning provision, should be using Moodlerooms. It is one of the most popular LMS's in the world, with about 2 million active users. As it is hosted in the cloud it also delivers a reliable and secure performance.

It is continually updated with the latest technological innovations and is easy for IT departments as there are no operational service demands. The virtual teaching assistant has a real impact on learner engagement, while teachers and instructors benefit hugely from tailored and detailed reports, as well as learner analytics that predict likely learner success.

Original writing promotes critical thinking. Engage students with timely, meaningful feedback. Track progress. Support students. Meet learning goals.

Maintain the academic integrity of your institution and improve learner outputs with Turnitin - a worldwide pioneer in evaluating learner work.

It is an easy-to-use service with assignment checking software, plagiarism detection, online grading and peer reviews.

Turnitin is a global leader in evaluating learner's work. It is one of the most widely distributed educational applications in the world, and it is used in 135 countries to manage the submission, tracking and evaluation of work online.

As an originality checker, work is compared against the world's largest academic database and the plagiarism software delivers instant reports on originality.

Automated grading tracks learner progress and provides accurate, automated marking saving valuable time. Learners also receive instant, targeted feedback to help them meet their goals.

Automated Campus Management

Academia ERP is the complete enterprise solution for colleges & universities looking to automate their Academic and Administrative processes.

This comprehensive suite streamlines complete student life cycle from Enquiry to Graduation as well as administrative processes such as Inventory, Hostel, Library, Human Resources etc. The product is built on cutting-edge Java technology and is robust & scalable.

Automation of functions within this platform brings efficient work- process flow across the college.

The standardisation of processes and quick access to information leads to better control while the streamlining of workflow across departments enhances productivity. A smooth information flow and accessibility to data /reports enables quick decision making which saves time and effort.
